

Voice Controlled Video Console

Ben Horkley and Jonny Surick
6.111, Fall 2013

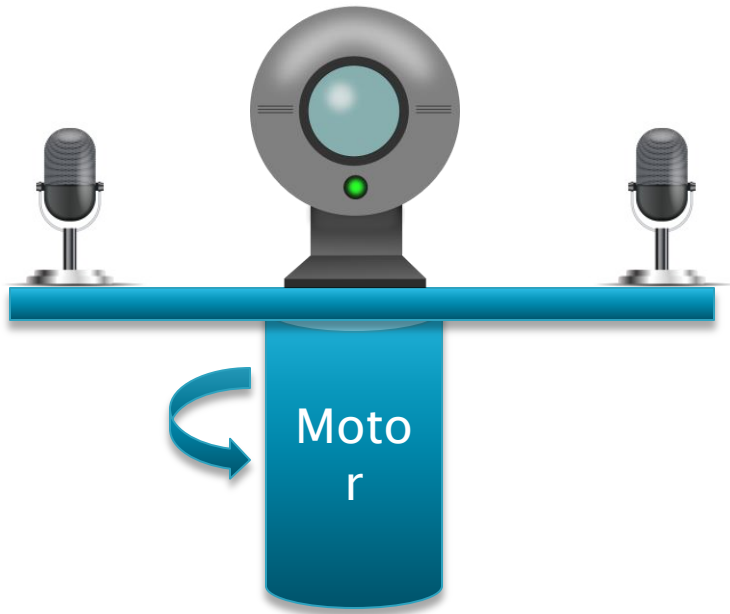

Voice Recognition is Everywhere

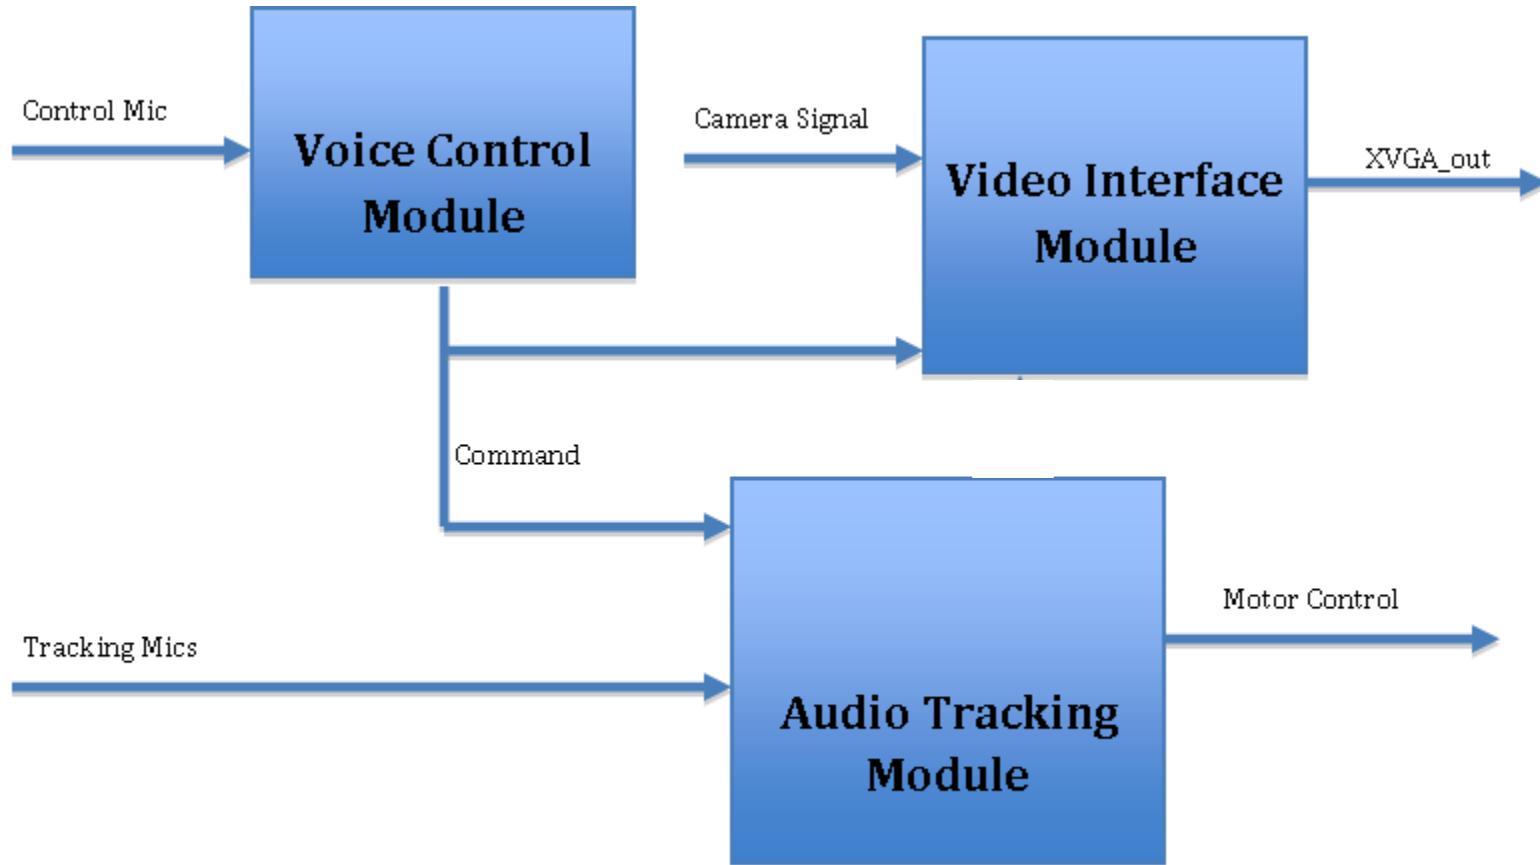

Console features

- ▶ Camera automatically tracks voice of speaker
- ▶ Voice commands control both camera and video display

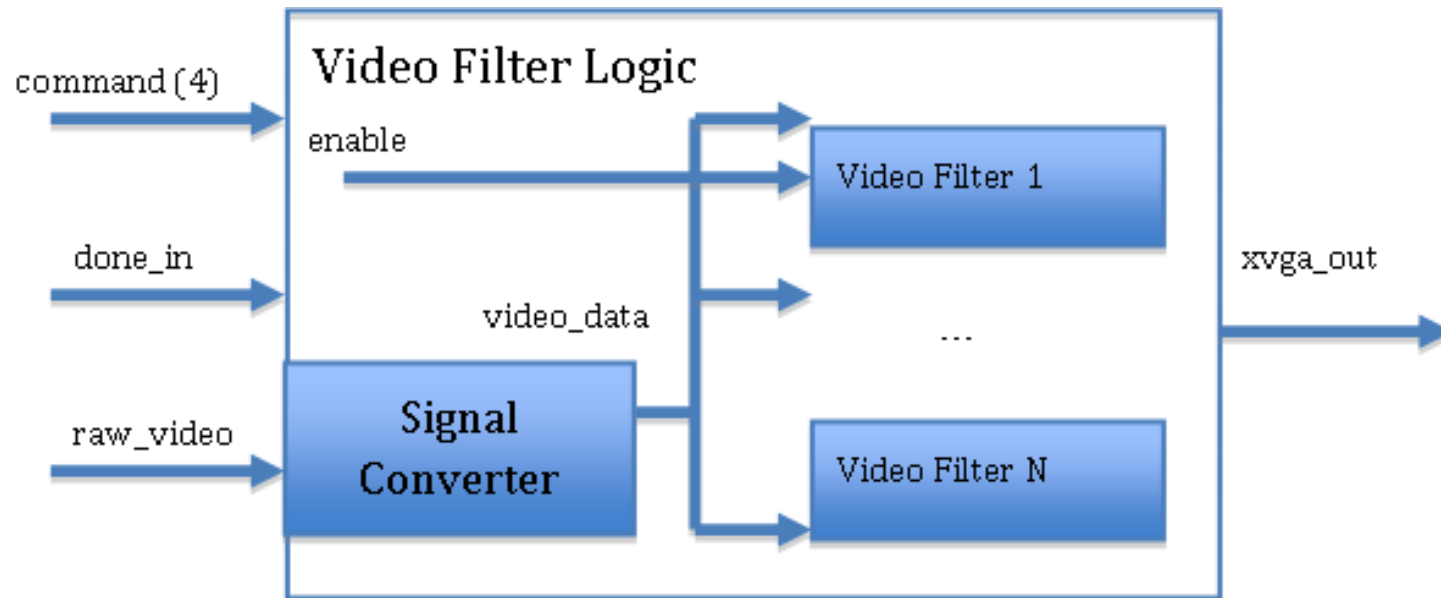

Overall system

Video interface

- ▶ Displays video from camera with filters
 - Color filters: red, sepia, B/W
 - Blur
 - If time: more complex filters
 - Motion blur
 - Fade in/out
- ▶ Receives commands from voice control module

Video interface

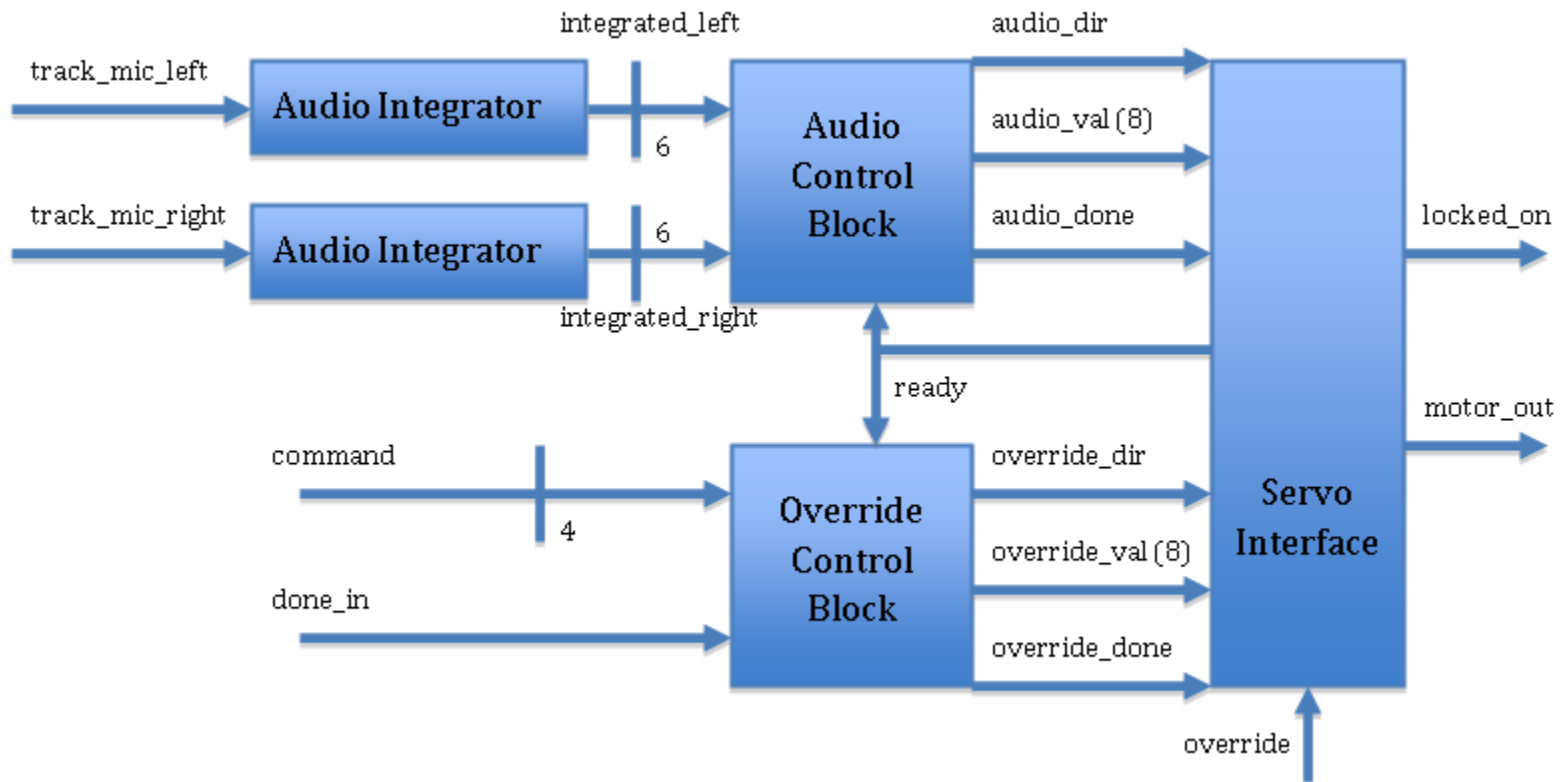

Audio tracking

- ▶ By default, camera follows audio source
 - Measures differential level on mics mounted on either side of camera
- ▶ Can be overridden by voice commands
- ▶ Camera is controlled by HS-311 Servo Motor

Audio tracking

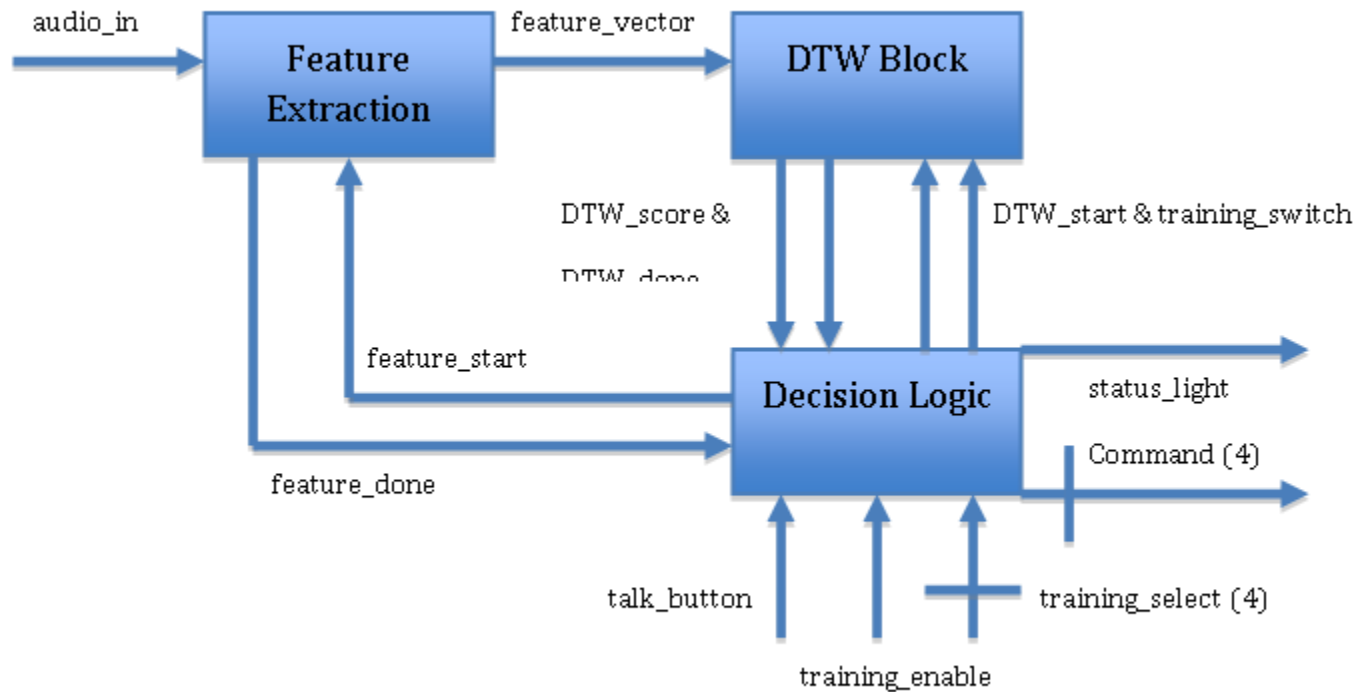

Voice control

- ▶ Trained to recognize one voice command for each action
 - Feature extraction and comparison on ~1 second samples
- ▶ Commands control both video display and camera tracking
 - Select video filter
 - Override automatic tracking to manually move camera

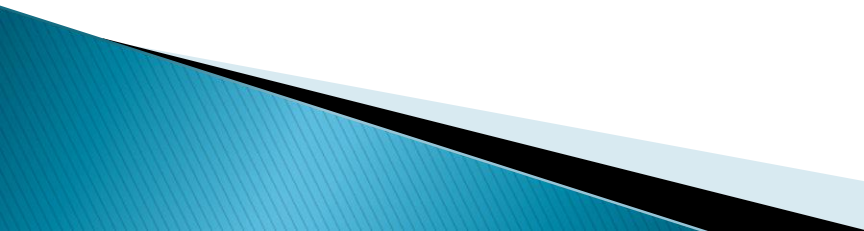

Planned Voice Commands

- ▶ 4 Initial Commands For Video
 - “None”
 - “Red”
 - “Black”
 - “Blur”
- ▶ 4 Commands For Motor Control
 - “Right”
 - “Left”
 - “Go”
 - “Stop”

Voice control

Timeline

- ▶ 11/17
 - Video: working NTSC–RGB conversion
 - Tracking: manual servo setting
 - ▶ 11/24
 - Video: working filters, set from kit
 - Tracking: working audio tracking, build assembly
 - Voice: software prototype (MATLAB or Python)
 - ▶ By Thanksgiving
 - Transfer voice to hardware and integrate
 - ▶ Post–Thanksgiving
 - General debugging and finishing
-
